

Rare lesions and tumors of the urinary bladder. Selected issues

Antonio Lopez-Beltran

Anatomical Pathology Unit, Department of Surgery and Pathology, Faculty of Medicine, University of Cordoba, Cordoba, Spain

ABSTRACT

Morphological variants of urothelial cancer have been recently described. The timely identification and recognition of these histological variants should avoid their misinterpretation as benign lesions. We emphasize the peculiar features of these variants because some may require different/specific therapeutic approaches.

Key words: bladder, micropapillary carcinoma, nested carcinoma, inflammatory pseudotumor.

Report from the First Milan Conference on Urologic Tumors. Milan, 27-28 January 2012.
