

A case report of dermatomyositis associated with small cell lung cancer

Wha-Yong Lee, Jack Kastelik, Anne Campbell, Ged Avery, Damian McGivern, and Mike Lind

Castle Hill Hospital, Cottingham, United Kingdom

ABSTRACT

Dermatomyositis associated with lung cancer is uncommon. Dermatomyositis associated with small cell lung cancer is very rare and carries a poor prognosis. We present a case of a patient with dermatomyositis associated with small cell carcinoma of the lung and review the literature.

Key words: dermatomyositis, lung cancer, small cell lung cancer, malignancy.
